

Johnson Creek Watershed Council

2022
Annual Report

Fish Passage/Badger Creek

Since 2016, JCWC has restored fish passage at one or more locations each year. In 2022, we removed a culvert on Badger Creek just off Telford Road. This the second site on this cold water tributary from which the Council has removed problem culverts. The focus of our fish passage program is to open cold water habitat to salmon, steelhead, and other native fish.

Thank you to the Oregon Department of Fish & Wildlife for funding this project.

Dragonfly Monitoring Sheds Light On Habitat Quality

After monitoring odonate—dragonfly & damselfly—biodiversity for seven years, we're learning a bit about how restoration impacts the populations of these wonderful insects. Our community scientists use the app iNaturalist to record observations of these odonates at several wetlands around the watershed.

For the first time this year, we've begun to monitor stormwater ponds in Gresham. One of our findings is that odonate biodiversity at these ponds is at least as high as that found in high quality natural wetlands. These Gresham stormwater ponds were designed to function as habitat in addition to attenuating stormwater. It seems as though they are succeeding!

Thank you to the City of Gresham, Portland Bureau of Environmental Services, and East Multnomah Soil & Water Conservation District for funding our Community Science program.

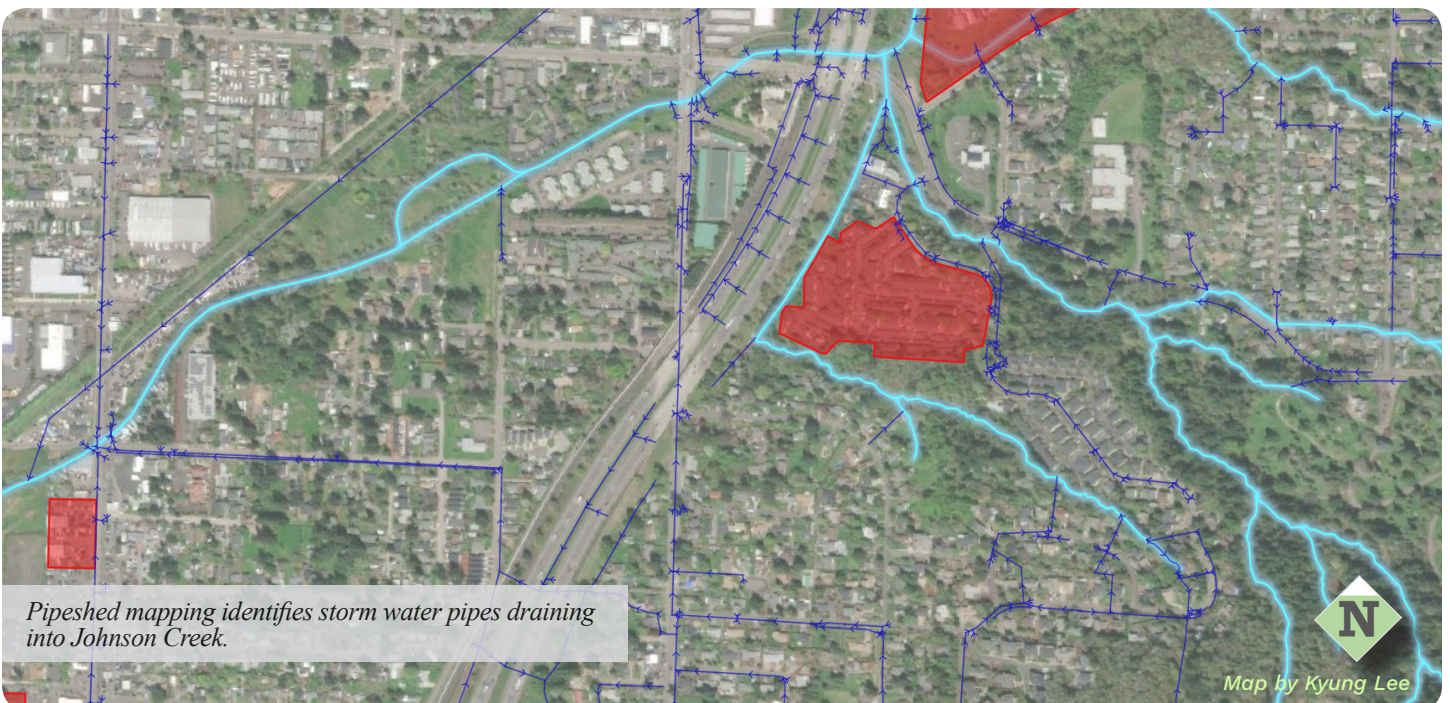

Better Drainage Through Depaving

Just as a watershed is the area upstream of a point draining all the rainfall, a pipeshed is the impervious area—parking lots, roofs, streets—that drains to a single outfall in the stream. By depaving or reducing impervious areas and creating rain gardens in their place, we can direct rainfall to soak into the soil on-site rather than allow it to go into the storm drains. This improves water quality by intercepting oil and other petrochemical residues from parking lots. It also helps to reduce floods by allowing water to slowly soak into the soil rather than quickly enter the storm drains and then the creek.

We've identified all the stream outfalls in the watershed and mapped the impervious areas that drain to each one, focusing on commercial and industrial properties. We're continuing to refine our prioritization and have begun outreach to property owners. We have two depaving projects planned for 2023. Our first depaving/rain garden project in 2013 was at the St. Mary's Ethiopian Orthodox Church. This year volunteers and the church's congregation maintained the rain garden together in June.

Thank you to the Oregon Watershed Enhancement Board for funding this analysis project.

Garlic Mustard: Not So Tasty To Other Plants!

For 10 years, JCWC has been part of a partnership led by the West Multnomah Soil & Water Conservation District to control garlic mustard in the Metro area. Although this plant is edible, it exudes chemicals through its roots that are toxic to other plants. With funding from the Oregon State Weed Board, we've worked on pulling garlic mustard along Johnson Creek in East Portland from I-205 to Powell Butte.

"At these sites, the ground cover has gone down dramatically," says Noah Jenkins, JCWC Riparian Project Manager. "It's about 10% of what it was when we started in 2012."

This project also serves as an experience-builder. We offer five paid 40-hour internships each year with this project. Our interns learn about riparian ecology and vegetation management strategies in addition to improving conditions for native plants along Johnson Creek.

Thank you to the Oregon State Weed Board and West Multnomah Soil & Water Conservation District for funding this program.

JCWC Board & Staff

Board of Directors

In 2022, we welcomed Kathy Dang, Julie DiLeone, and Damon Schrosk. We said farewell to Andrew Brown, Peregrine Edison-Lahm, David Gruen, Svetlana Hedin, Melanie Klym, and Bruce Newton.

Marianne Colgrove

Tim Crawley (Chair)

Kathy Dang (City of Portland BES)
